COTTAGES

Do you remember the little dwelling where Grandma lived? That little cottage under the elm that smelled of pumpkin pie? Did you ever wish to visit there again or to live there? To enjoy the pleasures of less house to clean, less taxes to pay, and more time to absorb the joys of life?

At Lonestar we believe we can help you realize that dream with our cottages. We offer standard plans that give from 350 to 900 sq ft. Larger cottages built in two units and joined on-site are also possible. The floor plan of your cottage is up to your imagination and our building specs. Foam insulation on floor, walls and roof keep out summer's heat and winter's cold with minimal pain to your pocketbook. Our Samsung mini-split A/C with it's 10 yr parts warranty is a key factor in helping to keep bills down. With pressure treated floor systems, optional hardie siding, and metal roofs, your honey-do list will go extinct. All appliance hook-ups are full size and ready for you to move your appliances in place. The 40 gal water heater is wired in and ready to go. What's your preferred interior decor? Sheetrock? Metal galvalume ceilings? Knotty pine with dark walnut trim? We offer this and more. And remember; its all portable. We can haul the memories of Grandma's house home to you.

Stop by one of our dealers to learn more. Or swing by our family-run shops to see a cottage in production and visit with the ones who use their skills and time to make your dream cottage become real. We want to use the Golden Rule to build your cottage, and we want to share with you the joy of living.
